SUMMARY

Senior Software Engineer with 4+ years of experience designing and building highly scalable, distributed, high-availability systems for security-sensitive Tier-0 production environments at Oracle Cloud Infrastructure. Strong foundation in object-oriented design, design patterns, and data structures & algorithms, with a consistent practice of taking end-to-end ownership of systems from design through production deployment and operations. Skilled in test-driven development (JUnit/Mockito), architecture and design documentation, infrastructure automation (Terraform), and SQL/NoSQL database design. Experienced in leveraging generative AI tools (OpenAI Codex) to improve development efficiency across code comprehension, refactoring, debugging, and test generation. Strong communicator and collaborative cross-functional partner to architects, security engineers, and partner service teams.

TECHNICAL SKILLS

Programming Languages & CS Fundamentals

Java, C/C++, Python, Data Structures & Algorithms, Object-Oriented Programming

Cloud & Infrastructure as Code

OCI, Terraform, Docker

Developer Tools & AI-Assisted Engineering

Git, Bitbucket, GitHub, Maven, IntelliJ IDEA, Jira, Confluence, OpenAI Codex

Backend, APIs & Distributed Systems

REST APIs, Microservices, Dropwizard, Google Guice, JUnit/Mockito, Swagger, Concurrency, Multi-threading

Security, Access Control & Databases

OCI Vault, Cryptography, Autonomous Database, SQL/NoSQL

CI/CD & Observability

CI/CD, TeamCity, Grafana

PROFESSIONAL EXPERIENCE

Senior Member of Technical Staff, Oracle

Oct 2025 - Present

Oracle Stability Initiative

- Leading core technical design and implementation for the Secrets Management service under Oracle's Stability Initiative, an Oracle-wide program focused on improving correctness, reliability, and scalability to support OCI's continued growth.

Member of Technical Staff, Oracle

Jun 2022 - Sep 2025

Individual Contributor (IC) in the Secrets Management team - a Tier-0 service within the Security organization of Oracle Cloud Infrastructure (OCI).

Service Disaster Recovery

- Led the end-to-end design and production rollout of Disaster Recovery for a Tier-0 OCI service across 100% of production regions, covering bare-metal and VM deployments and strengthening resilience to power outages, data loss, and service disruptions.
- Authored high-level and low-level architecture and design documentation and drove security, privacy, compliance, and engineering reviews; the reference implementation encouraged Disaster Recovery adoption across other Oracle Tier-0 services.

OCI Auto Secret Rotation

- Delivered the global feature launch by building Java validation and continuous-monitoring workflows for real-time failure detection, reducing failure detection time by approximately 90%.
- Automated prerequisite infrastructure with Terraform across Autonomous Database, OCI Functions, Virtual Cloud Network, routing tables, and related dependencies.

Integration with OCI's Network Based Access Control (NBAC)

- Designed and implemented an end-to-end integration with OCI's Network Based Access Control (NBAC), eliminating approximately 100% of redundant READ API calls and improving API performance, reliability, and access security.

Project Intern, Oracle

Jun 2021 - Jul 2021

- Developed an in-house browser extension backed by Oracle Vault Service for credential management, reducing reliance on third-party tools while preserving security and operational integrity.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Aug 2018 - May 2022

National Institute of Technology (NIT) Trichy

KEY ACHIEVEMENTS

- Oracle Org-wide Quarterly Spot Award for leading the Service Disaster Recovery initiative.
- Oracle Integrity Hero Nomination for uncovering significant performance issues in OCI NBAC integration.
- HackNITR 3.0 Winner for best use of Auth0 in the HackNITR hackathon. Submission - [link](#)
- Top contributor, NJACK Winter of Code 2020, an open-source contribution program organized by the Computer Science Club of IIT Patna. Facebook post - [link](#)
